

## THE WOMAN'S HOSPITAL OF MONTREAL.

The first building of the Western Hospital being completed, and ready for occupancy, and the Corporation of the Western Hospital not seeing the way to open it as a General Hospital, it has been leased to the Women's Hospital of Montreal. This Institution has during the last seven years been in operation at 51 St. Antoine street, principally as a Lying-in Hospital in connection with the Medical Faculty of Bishop's College, although now and then its beds have been occupied with patients suffering from diseases peculiar to women. It also has had a very considerable out-door clinic on female diseases. It is now proposed to extend the operations of the Institution, and this large and beautiful building having been secured, a committee of influential gentlemen has been organised, who will assist in its management. It is proposed to have about twenty lying-in beds, and ten beds for female diseases. There will be eight private wards, at the disposal of any physician in the city of Montreal, a boon which we believe will be appreciated by them. The situation of the institution is most beautiful, being on the outskirts of the city, and its sanitary position is all that could be desired. We believe it will grow in importance, and that in a very few years Montreal will be able to boast of possessing a Woman's Hospital which will do it no discredit.
