THE PULMOTOR

An apparatus for the resuscitation of the apparently lifeless
from the effects of

Anaesthesia Poisonous Gases Smoke Drowning
Electric Shock Collapse from any Cause

Simplicity of Operation and Highest Conceivable Efficiency

The operator has but to apply a face mask and turn a key, thereby starting the mechanism of the apparatus, to produce immediate and measured respiration, with pure oxygen entering the lungs with each inhalation.

Price Complete, with One Cylinder of Oxygen, \$150.00 Net

Extra Cylinder of Oxygen, \$17.50 Net
